## High Level Interior Cleaning

With our high reach system we can safely clean commercial and industrial interior spaces up to 14 metres high from floor level. No need for ladders, expensive scaffolding or hydraulic lifts.

Unlike traditional methods, our high reach vacuum system removes dust and debris rather than just moving it around or sweeping it to lower levels.

Our Powerful, dual and triple motor, industrial strength vacuum unit means fast and efficient removal of dust, contaminants and debris from beams, girders, pipework, ledges and ducts.

Previously awkward and hard to access areas are no problem, saving significant time and expense. Factory production line downtime is minimised or avoided completely.

Our high level interior vacuum systems provide a highly flexible and cost effective alternative to traditional methods, allowing conformity with legal and insurance requirements.
